Regulations included in institutional context measure

As noted in the main text, the institutional context measure is a measure of overall firearm regulation derived from an IRT decomposition of a binary matrix. The matrix indicates whether or not each state has some form of the following rules: background checks for unlicensed sales; expiring purchase permits; required mental health reporting; sale prohibitions to persons with violent/firearm criminal record, persons on no-fly/terror watch lists, persons with drug/alcohol abuse issues, juvenile offenders, persons with mental illness history; background checks for all firearms; mandated removal of firearms from domestic violence scenes; removal of firearms from persons under a protective order; dealer licensing; alternative dealer regulation; mandated record of sales; restrictions on multiple purchases; waiting periods; possession licensing requirements; firearm registration mandates; required loss/theft reporting: prohibition on guns in bars, schools, state parks, houses of worship: mandated allowance in parking lots; "stand your ground;" assault bans; large capacity magazine bans; fifty caliber rifle ban; license for ammunition requirement; purchase age minima; safe storage mandates; authorized use technology mandates; liability for accidental child injury; imposed mechanical safety standards; microstamping requirements; local authority discretion; federal exemptions; medical gag rules.

The results of the scaling model produce a distribution of estimates, pictured in Figure 2 of the main text. Reestimating the main models in a bootstrap the assess the impact of measure uncertainty does not change the substantive conclusions.

Table S2: Law Key

Number	Description	Number	Description
1	Background check on all unlicensed sales	22	Require registration for all firearms
2	Background check on select unlicensed sales	23	Require reporting of stolen firearms
3	Require expiring purchase permit	24	Concealed guns in bars
4	Mental health reporting	25	Concealed guns in schools
5	No sales to fire-arm misdemeanants	26	Concealed guns in parks
6	No sales to terror suspects or "no-fly" listees	27	Concealed guns in church
7	No sales to drug/alcohol abusers	28	Concealed guns in parking lots
8	No sales to juvenile offenders	29	"Stand your ground"
9	No sales to those with mental health histories	30	Assault weapons ban
10	Mandated background checks on handguns	31	High capacity cartridge ban
11	Removal of firearms from domestic violence scenes	32	Fifty caliber rifle ban
12	Removal of firearms from protection order focal person	33	Require license to buy ammunition
13	Require dealer license	34	Minimum purchase age higher than federal
14	Non-license dealer regulation	35	Safe storage requirements
15	All sales records must be sent to law enforcement	36	Personalized, owner-authorization technology mandates
16	Handgun sales records must be sent to law enforcement	37	Child access liability
17	Multiple purchases restricted	38	Other specific safety standards
18	3+ day waiting period	39	Microstamping mandate
19	1-2 day waiting period	40	Allow additional local regulation
20	License for purchase or possession of all firearms	41	Federal law declared inapplicable
21	License for purchase or possession of select firearms	42	Penalize medical experts for firearm risk discussions with patients

Full model specifications

Table S6 shows all binomial model estimates as well as two normal linear model estimates. The models show that permitting procedures only exert the predicted effects when all contextual variables are kept out of the model. In sum, the analyses suggest that permitting procedures most likely have no effect on perceptions of how many firearm carriers there are in a given state.
